

Request Reference: FOI/013/25

Published: 16 June 2025

Information requested:

During maxillofacial surgery are living donors used for hair, teeth and skin transplants? I have seen many young but old people around my home town lately. They are often prematurely grey, and have old people's teeth. I presume the hospitals are using growth hormone children mainly as donors. This is illegal and unethical. I have told MI5, the human rights board and the BMA.

Response:

The State Hospital does not undertake maxillofacial surgery and as such we give notice that we do not hold the information requested. (FOISA Section 17)
